| SE | /W | INSULATING MATERIALS <br> based on Mica for use <br> in electrical equipment <br> - in standard manufacturing sizes <br> -in cuts, punched and machined parts |  |  | The need for increasingly smaler unis of el eccirical agyregales with increasing capactites demanad higher standards tom insulaling madeiala and Sysiems. Becaus of and due to tis outsinnoning dielectrical, hhemal and mechancal characteristics, the mineralogicial group of Mica indifferent development processes is is replaceable and thus cannot be sibsitilued by ohere ingulaing |  |  | malerials in the electrical enginneeing field. Combined with selected resinns mica as mica spititings or mica paper is processed into highgrade insulating maletials. Constantly improved tochnologies and newly devel. oped resin systems will ensure that our insuating materials based on mica will meet the requirements demanded in the tuture. |  |  |
